

Continuing with WP4 Verification of reference protocols

Reminder of interesting protocol properties (after D3)

- Properties at the conceptual level / protocol-dependent properties:
 - verification of correctness of intentions
 - verification of correctness of a treatment
 - verification of safety of a treatment
 - ✗ • verification of sequences of actions done by a physician

Promising protocol properties (after May 6th)

- Properties at the conceptual level / protocol-dependent properties:
 - verification of correctness of intentions (diabetes & jaundice)
 - verification of correctness/safety of a treatment using indicators (jaundice)
 - verification of safety of a treatment using forbidden drug combinations (diabetes)

What we already have

- Examples of conceptual/protocol-dependent properties ✓
- A decision on the scope/depth of the properties to verify ✓
 - pick up a promising/easy one to start with ➡
- A decision on the proof support to implement?

What is next?

- Next milestone:
 - complete KIV formalisation of reference protocols by...
 - end of May
- Fix some internal milestones?
 - make a decision on the properties by...
 - mid Jun, teleconference on 17/6 @11h

What is next? (cont.)

- Distribution of verification effort?
 - Annette, Michael, Peter and Mar
 - next tele-meeting: 15/6 @13h
